

THE ISTITUTO TOSCANO TUMORI (ITT)

recently established by the Regione Toscana, has the mission to understand, treat and reduce the risk of cancer in the entire population. ITT is a network that comprises all of the cancer clinical facilities in the Region. In order to develop its research programme, ITT is establishing a Core Research Laboratory in Firenze and satellite Laboratories in Pisa and in Siena. These laboratories will operate in close association with Teaching Hospitals/Universities.

Applications are invited for a limited number of Principal Investigator positions within the ITT Research Laboratories. Each PI will be assigned laboratory space, appropriate equipment and a start-up grant for up to four years to provide for supporting personnel and laboratory supplies. PI appointments will be for five years, with salary commensurate to track record and seniority.

Qualified candidates with experience in cancer research who may be interested in joining ITT are encouraged to send curriculum vitae, list of publications, and brief outline of research programme, which can be in any area of cancer research. ITT priorities include identification of causative molecular lesions in individual tumors; animal models of human tumors; gastric cancer; high penetrance and low penetrance cancer susceptibility genes. Post-doctoral positions are also available.

Please address enquiries/applications to

Professor Lucio Luzzatto,
Scientific Director, ITT, Via Taddeo Alderotti 26N,
Firenze, Italy
